MACDONALD BRICKS

Face Bricks

Red Rustic

Bright reddish coloured face brick manufactured in standard brick dimensions. Mostly used for exterior walls and durawalls

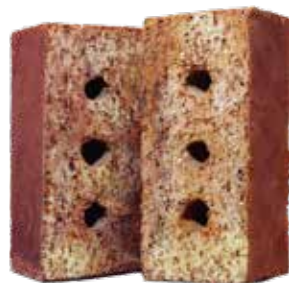

225 x 105 x 75mm
15 - 30 MPa, Water absorption of less than 2%

Light Brindle

Light brownish face bricks for super structure. Very solid and weatherproof. Can be used for all exterior walls without the need to plaster.

225 x 105 x 75mm
15 - 30 MPa, Water absorption of less than 2%

Brindle Smooth

Bright coloured face brick that is manufactured in standard brick dimensions. Mostly used for exterior walls and durawalls

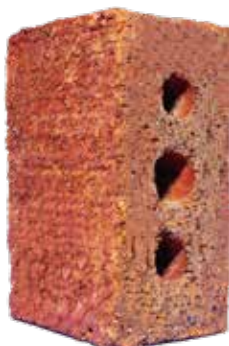

225 x 105 x 75mm
15 - 30 MPa, Water absorption of less than 2%

Dark Brindle

Face bricks for super structure. Much more beautiful and attractive than bricks used for the interior walls. They are very solid and weatherproof.

225 x 105 x 75mm
15 - 30 MPa, Water absorption of less than 2%

Brindle Double

A double size face brick for super structure. The length of the brick is twice its width and saves on bricklaying time.

225 x 105 x 150mm
15 - 30 MPa, Water absorption of less than 2%

Multi-Special

Multi-coloured face bricks that can be used without plaster. They can be used for durawalls and window cills. They have a rustic appearance

225 x 105 x 75mm
15 - 30 MPa, Water absorption of less than 2%

Commons & Industrials

Black Spotted

Mainly used for super structure without the need to be plastered. The standard ones come in regular brick dimensions. Can be used to build from the foundation going up.

Compressive strengths of 20 - 40 MPa, Water absorption of less than 2%

Commons

Clay bricks suitable for general building work that is to be plastered and are made with no special surface treatment.

225 x 105 x 75mm
7 - 12 MPa, Water absorption of less than 10% hence the need for plastering

Industrials

An engineering brick manufactured to strict dimension and quality tolerances. A brick for foundations also known as a load bearing brick.

225 x 105 x 75mm
15 - 30 MPa, Water absorption of less than 2%

Clinker

A deformed overburnt brick. Can also be used as a face brick. Clinkers have a unique uneven finish that can be used creatively for unique aesthetics.

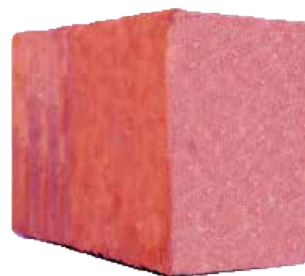

Compressive strength of +40Mpa, Water absorption of less than 1%

Common Double

These are double size common bricks suitable for general building work that is plastered and are made with no special surface treatment.

225 x 105 x 150mm
7 - 12 MPa, Water absorption of less than 2%

Industrial Double

A double size engineering brick manufactured to strict dimensions. The length of the brick is twice its width and saves on bricklaying time.

225 x 105 x 150mm
15 - 30 MPa, Water absorption of less than 2%

Bullnose

Bullnose brick is a style of brick that has one, some or all of its corners rounded off. These bricks can be used to create soft and attractive curved edges to steps, sills, or in capping walls. Typical uses are water tables on wall and columns, step treads and wall caps. Other uses are sills under windows, column caps, details around recessed panels and doors.

Heather Blue

A deep blue coloured brick, with high strength and a hard surface. Used extensively for facing and superstructures. Manufactured in standard dimension, comes in both smooth and textured finishes without the need for plastering.

225 x 105 x 75mm +/- 2mm
Strength: > 20 Mpa
Water Absorption of less than 5%

Pavers

These are primarily made for paving driveways and walkways. Can also be used to decorate walls or for window cill and edging durawalls. In some cases they have been used to create gardening structures surrounding trees and flowerbeds.
